

MATH 647 Spring 2026 Final Project
Due 11:59 pm, Tuesday, May 5, 2026

1. You will read one research paper selected from the paper list and provide a clear and thoughtful exposition of the paper. The report is limited to 8 pages.
2. Please do not simply summarize the paper. More importantly, you should engage critically with the work. For example, you may discuss which assumptions could be weakened, possible extensions, parts of the proofs that are unclear or potentially incorrect, open questions raised by the paper, any improvements you can suggest or prove, as well as any simulations you run and new phenomena you discover.
